

Intelligent video searches for anomalies

Posted: May 1, 2006

Artec Vision Systems' IVS system is a combination of intelligent surveillance products that uses a proprietary algorithm to identify abnormalities within a digital image, such as movement within a controlled space. The system counts and recognizes objects, people and situations and alerts security personnel to take action and pre-empt potential situations. The system can be customized and integrated into many applications. **Artec Vision Systems Inc.**
