INTELLIGENT VIDEO SOLUTIONS

*The Power of Seeing...
Without Watching*

Restaurant and Lounge

Miso on Meramec is an award-winning 4,000 square foot multi-level sushi and pan-asian fusion tapas restaurant and popular hot-spot in the heart of downtown Clayton (St. Louis), MO.

The primary security concern is the safety of customers and employees. Management is also looking to help solve business problems such as inventory tracking and monitoring employee/customer activity remotely when away from the location.

Customer Concerns

- Patron and Employee safety and related liability for the establishment
- Manager's Office trespassing and theft.
- Potential break-in through rear entrance.
- Perimeter concerns of loitering in parking and behind building near rear entrance.
- Very difficult to track inventory in stockroom with high potential for theft of food and liquor.
- Ability to access the restaurant cameras remotely to monitor employee and customer activity

Arteco Solution

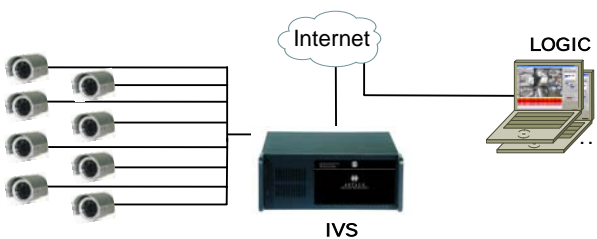

- Violated Area applications detect entry in restricted areas in real-time and logs as security event.
- Virtual Trip-wire detects loitering vehicle near rear entrance and logs as security event.
- Violated Area time-stamps video clips of all employee inventory transactions.
- Seamless Remote Setup (SRS) gives management 100% access to live and recorded video around the clock.

What they say about us

- "The Arteco IVS gave us a new proactive tool in loss prevention with room to grow as our security needs change with new locations. Being able to access and see video events remotely has been a huge advantage in managing a busy restaurant."
