**Next Stop for Security: Systems Integration
Arteco Introduces its Software Development Kit**

St. Louis, MO (July 16, 2008)- Arteco, the industry leader in the field of server-based intelligent Video Solution (IVS) products for the security industry, has announced the release of a Software Development Kit (SDK) for open-architecture integration with other security platforms.

The new addition to the ARTECO-IVS suite of Video Analytics products will allow Arteco's client software ARTECO-LOGIC to be integrated into a wide variety of security products software such as video management, access control, and central monitoring.

"Converging security products is the goal of Integration and the market is demanding non-proprietary products from all Manufacturers in the industry," said Stephen Birkmeier, Vice President of Sales Operations for Arteco, "The launch of our SDK is another step in leveraging the real-time detection of Arteco Analytics to help create more effective and seamless security environment."

Designed based on the hallmarks of Arteco technology of accuracy and ease of use, the SDK has been engineered to receive the output from ARTECO-IVS servers through the user interface of other security software insuring that the events are detected with the same level of accuracy built into every ARTECO-IVS. The systems require ARTECO-LOGIC software for designing and tuning of the video analytics applications for each channel. Once integrated, the ARTECO-SDK allows the output of all video and real-time alert notifications from ARTECO-IVS servers to be viewed and controlled through the interfaces of other security product manufacturers.

"Our Integration partners look to Arteco to lead the way with innovation in making video analytics the standard in video security," adds Birkmeier, "the ARTECO-SDK provides the frame-

work for the increased deployment of Intelligent Video and opens up the door for our IVS product line in many new vertical markets that are ripe for analytics.”

Arteco is currently in negotiations with several leading manufacturers of Access Control, Central Monitoring Management Software and IP Video management products to integrate the real-time analytics of the ARTECO-IVS into their respective product lines.

About Arteco Vision Systems, Inc.

Located in St. Louis, MO, Arteco Vision Systems, Inc. is a member of the Arteco Global Family, headquartered in Faenza, Italy, and holds exclusive rights to market proprietary intelligent video solution (IVS) systems in the U.S. for both commercial and residential settings. With more than 500 installations globally, Arteco provides all hard and soft components to maximize the optimum performance of a balanced, customized system. Its advanced system analysis enables users to move video surveillance from a reactive forensics tool to a pro-active, pre-emptive security measure that can stop violations as they happen. The Arteco IVS is currently being used to increase security at subway stations, utilities, museums, hospitals, highways, manufacturing facilities, water treatment plants and city centers, as well as protecting national landmarks.
